# Develop the functional form for Scheduling a new event.

Develop an responsive form (as shown in the **Visual Design** mockup along with the validations provided)

by using any free third party angular sources/components.

Things to be followed:

- Need validation for mutual exclusive components (Start time under Run Window and Notification start times can not be same and exceed)

- Can use default skinning provided from the third party sources/components

- Need customisation for components which has NG chips (Add guests & Notification start time) including error validation CSS

- Icons used in the mockup can be taken from Font-awesome

- In-line edit for the NG chip components is expected and user should be able to copy and paste the email addresses from the UI component

- Once all the UI fields are filled then enable the Save event button

Please find the detailed mockups in the following slides provided with a Legend.

Visual Design   **Error Validation**   **In-line Edit Function**   **Successfully Done**

Response back through email by uploading the source code in archive.

Schedule a new event

Event title *

Time zone

| India Standard Time(Asia/Kolkata) ▼ |

Run window

| HH:MM 🕐 | | HH:MM 🕐 |

Select days *

☐ All ☐ Sun ☐ Mon ☐ Tue ☐ Wed ☐ Thu ☐ Fri ☐ Sat

Add guests *

Enter valid email addresses

Guests can

☐ Modify event   ☑ Invite others   ☐ See guest list

Notification type

⦿ Email notification   ○ SMS notification ❓

```
        ^              ^
  [ H H ]  :  [ M M ]  [ Add ]
        ∨              ∨
```

Notification start times *

Add single/multiple start times 🕐

Message *   0/255
